## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 5 is objected to because of the following informalities:

In line 5, insert - -respectively,- - before "and another".

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1 and 4 are rejected under 35 U.S.C. 102(a) as being anticipated by Jamal et al. (US 5,930,366).

As shown in figures 1-7, Jamal et al. discloses a pilot synchronization channel structure for CDMA system, comprising:

(1) regarding claim 1:

a synchronization channel (SCH) (for example, combined channel in figure 7);

a pilot channel overlapping the SCH (for example, pilot channel in figure 7, column 6, lines 1-25); wherein, the pilot channel comprises data frames comprising p time slots (see figure 6) and each time slot is packed with m preselected pilot symbols after spread spectrum and scrambling (column 2, lines 45-56, column 3, lines 6-17, and column 12, lines 44-65).

(2) regarding claim 4:

wherein all of the m pilot symbols are 1 or -1 (column 12, lines 44-65).

4. Claims 1, 4, 6 and 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Nystrom et al. (US 6,526,091).

As shown in figure 3, Nystrom et al. discloses a pilot synchronization channel structure for CDMA system, comprising:

(1) regarding claim 1:

a synchronization channel (SCH) (PSC and SSC);

a pilot channel (PSC) overlapping the SCH (column 6, lines 1-25); wherein, the pilot channel comprises data frames comprising p time slots (see figure 6) and each time slot is packed with m preselected pilot symbols after spread spectrum and scrambling (column 5, line 3-column 6, line 36 and column 11, lines 29-37).

(2) regarding claim 4:

wherein all of the  $m$  pilot symbols are 1 or  $-1$  (column 12, lines 44-65).

(3) regarding claims 6 and 8:

the claimed limitations are disclosed in column 5, line 3-column 6, line 7.

***Allowable Subject Matter***

5. Claims 2, 3, 5 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
